College of Engineering & Technology

Department: Mechanical Engineering   Marks: 20
Lecturer: Dr. Rola Afify   Time: 1.00 - 2.00
Course Code: ME356   Date: 16/12/2015

Name: R.N.:

Answer the following question:

The 70 mm screw of a 10 kN shop press, shown in Figure, has a trapezoidal thread with an angle of 28. The operator's force may be taken 180 N for each hand. The mean diameter of collar is 60 mm. Determine:

a) The length S, assuming that the coefficient of friction is 0.12 in the threads and 0.125 at the collar. The inner diameter is 58 mm. The pitch is 12 mm.
b) The efficiency of the press.
c) Is the screw self-locking? Explain.
d) The maximum normal and shear Stresses in the screw.
e) The shear stress on the screw and nut threads.
f) The bearing stress in the threads.

You may use this

$$T = W \frac{dm}{2} \left[\frac{\pi \, \mu \, dm \, \sec\alpha + L}{\pi \, dm - \mu \, L \, \sec\alpha} \right] + \frac{\mu_c \, W \, dm_c}{2}$$

Good Luck   1/1
