Answer the following questions:

1- Express each of the three forces acting on the bracket in Cartesian vector form with respect to the x and y axes. Determine the magnitude and direction $\Theta$ of $F_{1}$ so that the resultant force is directed to the positive $\mathrm{x}^{\prime}$ axis and has a magnitude of $F_{R}=600 \mathrm{~N}$.

2- Determine the magnitude of the reactions on the beam at $A$ and $B$. Neglect the thickness of the beam.

3- Determine the force in each member of the truss and state if the members are in tension or in compression. Set $\mathrm{P} 1=40 \mathrm{kN}, \mathrm{P} 2=20 \mathrm{kN}, \mathrm{a}=1.5 \mathrm{~m}$ and $\mathrm{e}=2 \mathrm{~m}$.

4- In the frame shown, determine the vertical and horizontal components reactions at pins B and C .

5- The uniform pole has a weight of 30 N and a length of 26 m . If the it is placed against the smooth wall and on the rough floor in the position shown in figure. Will it remain in this position when it is released? The coefficient of static friction $\mu_{s}=0.3$.

6- a) Proof that $v=v_{o}+a t$, if $\mathrm{a}=$ constant and the particle starts from $v=v_{o}$.
b) The velocity of a particle traveling in a straight line is given by $v=6 t-3 t^{2}$ $\mathrm{m} / \mathrm{s}$, where t is in seconds. If $\mathrm{s}=0$ at $\mathrm{t}=0$, determine the particle's acceleration and position when $\mathrm{t}=3 \mathrm{~s}$.
